

## The AI Receipt

A simple after-action note that keeps AI use honest: what tool was used, what changed, what was checked, and what the kid actually learned.

8-17

10 minutes

Draft resource

### 1 Tool used

Name the app, model, website, or school tool. If you cannot name it, write "unknown" and talk about why that matters.

### 2 Prompt or task

Write the job you gave it in plain English: "help me outline," "quiz me," "make a chore chart," or "explain this paragraph."

### 3 What AI gave back

Describe the output: answer, outline, code, image, study questions, plan, explanation, or first draft. Do not just write "it helped."

### 4 What changed

Mark what the human did: edited, rejected, rewrote, checked, combined with another source, simplified, or turned into original work.

### 5 What we checked

List the receipt: teacher rule, source, calculator, parent review, textbook, rubric, or real-world test. No receipt means no blind trust.

### 6 What I learned

One sentence in your own words with the AI closed. If your kid cannot do this, the tool did too much of the thinking.

"A receipt is not a punishment. It is proof that the tool helped and the learning still belongs to you."

### The receipt rule

If AI changed the work, name the change. If it gave a fact, name the check. If your kid learned something, they should be able to say it plainly.

### Quick honesty check

Could I explain this without AI?

Did I change anything important?

Would I be comfortable showing this receipt to a teacher?

### Make it yours

Our rule: \_\_\_\_\_

We will try: \_\_\_\_\_

Ask a human when: \_\_\_\_\_
